Forecast for Monday 07 Aug 2023

Weather: Some patchy low cloud may develop during the early hours, and a few pockets of mist and fog may form in the valleys by dawn. This will soon clear through the morning to leave a generally dry day with sunny spells, although the odd light shower is possible. Skies probably turning cloudier by the afternoon and thickening cloud may bring a few spots of rain or drizzle later in the evening.

Chance of cloud-free hill tops above 600m: 60% becoming 90%.

Low cloud and visibility: Patches of mist/fog and low cloud, with bases 300-400m lifting through the morning to generally clear the summits early afternoon, although patches may come and go on the highest summits, particularly in association with any showers. Visibility generally good or very good, but poor to very poor in any mist, fog and cloud covering hills.

02:00 on Mon 07 Aug 2023	0.2mm	15.8mm	16mm

Forecast for Tuesday 08 Aug 2023

Weather: A murky morning with extensive low cloud, mist and hill fog. Persistent light rain and drizzle, with the odd heavier burst possible. Perhaps becoming drier later in the afternoon, but low cloud will probably persist.

Maximum wind: Southwesterly 20-25 mph gusting 30-35 mph easing to Northwesterly 15-20 mph

Chance of cloud-free hill tops 600m: 10% improving to 60%.

Low cloud and visibility: Widespread cloud base 300m or below for much of the day. Visibility very poor in low cloud and drizzle, but perhaps improving a little later in the afternoon as precipitation eases.

Temperature: **Valleys:** Plus 12 Celsius rising to plus 19 Celsius.
At 600m: Plus 13 Celsius.
Freezing level: Above the summits.
